

OBJECTIVE
known-world lane

exact target-world verifier

STATUS: COMPLETE

$n = 576$ frozen cases
(4 exact-verifier families)
256 licensed / 256 rejected / 64 unknown

Full applicability contract matched
576/576 exact-verifier decisions:
0 invalid false-accepts, abstains on every unknown

Primary residual vs. mechanism-only control:
Brier reduction 0.120, 95% CI
[0.094, 0.148]
> preregistered 0.05 threshold

established evidence

NATURAL-domain lane

independent-annotation required

STATUS: DEMOTED

$n = 16$ frozen v2.1 items
power-limited: needs $n \approx 48$ for the
registered 0.05 MDE

Only a `DEMOTED_AI_OPERATOR` path ran;
no independent external annotators,
adjudicator or provenance auditor

Verdict: `INDEPENDENT_`
`CONFIRMATION_ABSENT`
blocked on external judgement (#359)

non-independent pilot

FUTURE empirical study

natural cross-domain transfer

STATUS: PLANNED

Fresh label-blind item set,
two independent annotations + adjudication
+ provenance audit

Six-family robustness extension
(sign-test $p = 0.125$ at 4 families
is insufficient for a broad law)

Compare witnessed structure vs.
strongest
held-out semantic control (bge-reranker);
disjoint end-to-end routing study
