

computational access $\neq$ **cross-context coherence** $\neq$ **epistemic authority** —
three independent coordinates; a claim's height on one plane does *not* set its
height on the others (not a ladder).

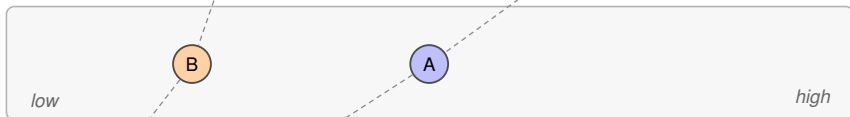

ACCESS

active / reusable
by computation

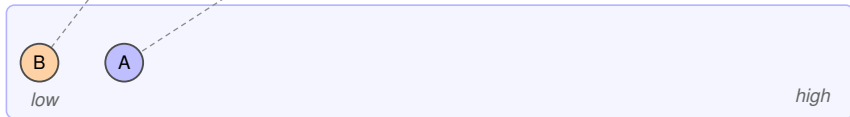

COHERENCE

coexists after
context alignment

AUTHORITY

licensed to
assert

● **A** live workspace conjecture: high access, but low authority

● **B** refuted claim: retained in history, zero authority
