

evaluate each obligation, three-valued status

retrieval nominates
a source episode
 $\text{ranker} \neq \text{transfer}$

nominate

applicability obligation set $\Omega_{A \rightarrow B}^{(q)}$

- source $\rightarrow$ target role map
- preserved invariants I^+
- forbidden losses I^-
- target boundary conditions
- QoI requirement

any obligation
VIOLATED?

yes: ≥ 1 violated

REJECTED

no violation

**non-
compensatory**
AND-gate:
all load-bearing
SATISFIED?

yes: all satisfied

LICENSED

no: ≥ 1 unknown

CANNOT_CHECK

non-compensatory: a single demonstrably violated obligation forces **REJECTED**; no count of preserved relations can compensate for it.
